## SKILLS

|                 |                                                                                         |
|-----------------|-----------------------------------------------------------------------------------------|
| Languages       | Python, C/C++, HTML, CSS, JavaScript, MySQL                                             |
| Frameworks      | React.js, Tailwind CSS, Bootstrap, Node.js, Express.js                                  |
| Libraries       | NumPy, Pandas, scikit-learn, Folium, Keras, Turtle, TensorFlow, NLTK                    |
| Tools/Platforms | MongoDB, MS SQL Server, IBM Cognos, Selenium                                            |
| Soft Skills     | Problem-Solving, Team Player, Teamwork & Collaboration, Strategic Planning, Flexibility |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |        |

| <b>Old Car Price Prediction</b>   Python, ML, MERN, Web Scraping                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Aug'25 |
| <ul style="list-style-type: none"><li>Scraped and cleaned used car data from Quikr.com with anomaly detection &amp; feature engineering.</li><li>Built a Linear Regression model (<math>R^2 \approx 0.85</math>) with dimensionality reduction, deployed in a MERN web app.</li><li>Added visual analytics (year, mileage, fuel type) to provide resale insights and fair price estimates.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                              |        |
| <b>Excelify</b>   Full-Stack (MERN), RESTful API, Data Processing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Jul'25 |
| <ul style="list-style-type: none"><li>Forged a full-stack MERN platform to streamline Excel data analysis, featuring secure file uploads and intelligent server-side processing for complex datasets.</li><li>Engineered a robust RESTful API with Node.js and Express, incorporating JWT for secure authentication, Multer for file handling, and SheetJS for parsing Excel data into MongoDB.</li><li>Crafted a responsive front-end with React 19 and Tailwind CSS, featuring an intuitive drag-and-drop uploader and dynamic data previews to deliver a seamless user experience.</li></ul>                                                                                                                                                                                                                                   |        |
| <b>House Price Prediction</b>   Python (Pandas, Scikit-learn), Django, Kaggle, MongoDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Jan'25 |
| <ul style="list-style-type: none"><li>Collected &amp; integrated housing datasets from Kaggle and additional sources, creating a unified dataset, followed by EDA, data cleaning, anomaly handling, duplicate removal, feature engineering, and dimensionality reduction to ensure robust model efficiency.</li><li>Built &amp; trained a Linear Regression model (<math>R^2 \approx 0.89</math>) and enhanced it with AdaBoost, evaluating performance using <math>R^2</math>, RMSE, and MAE for reliable predictions on unseen data.</li><li>Deployed the solution on a Django-based web platform with input forms for property details, integrated visual analytics (historical trends, yearly variations, profit margins), and performed stochastic error analysis to provide actionable insights for stakeholders.</li></ul> |        |

## CERTIFICATIONS & ACHIEVEMENTS

### Certifications

- Machine Learning Certification (IBM - Data Visualization)
- Responsive Web Design (freeCodeCamp)
- MERN Stack (Apna College)
- Data Science Masters (PW Skills)
- Data Science Certificate (Saylor.org)

### Achievements

- Hackathon Participation: Code Strome 36-Hour Hackathon, MLSA Hackathon
- Code-A-Haunt Hackathon (Coding Blocks LPU).
- Responsive CSS Challenge** | 21 Days Bootcamp Completed 21 mini-projects in 21 days, gaining expertise in responsive design, media queries, and SEO-friendly CSS practices. Built modern, accessible, and scalable CSS layouts for real-world web applications.
- AlumniConnect Application** | MERN, socket.io, APIs, Hackathon Project Built in a 36-hour hackathon as a group project, this platform connects students with alumni for mentorship through chat, appointments, and role-based profiles.
